93rd NEPS Data Training

July 07/08, 2022 | virtual via Zoom | English

07/07/2022	Basic Modules
09:30 - 10:30	**NEPS Framework Concept and NEPS Data** The module focuses on the theoretical and methodological principles of the NEPS study. This includes the sampling and survey design of the NEPS starting cohorts as well as the content of the survey program, including competency tests.
10:45 - 12:15	**NEPS Variable Search and Data Documentation** The comprehensive NEPS survey program and the structure of the Scientific Use Files with several datasets require a careful look for suitable variables. Search strategies are presented in this module with examples using the available tools and materials.
12:30 - 13:00	**NEPS Data Access** There are three types of NEPS data availability, which differ in terms of data anonymization and access control. These differences are briefly explained and the respective requirements for data access are shown.

07/08/2022	Advanced Modules
09:00 - 10:30	**NEPS Merging of Variables with Stata and SPSS** A key challenge in working with the NEPS Scientific Use Files is merging information from several datasets with different data structures and different identifier variables. In this module, typical procedures are demonstrated based on examples using Stata and SPSS.
11:00 - 12:30	**NEPS Competence Data and Competence Development** In the NEPS study, domain-specific and cross-domain competencies are measured by means of respective tests, often in a panel design. The module gives an overview of the survey of competencies, the scaling and the possibilities of analysis.
13:30 - 15:45	**NEPS Episode Information** The NEPS Scientific Use Files contain datasets with different data structures (long, wide, spell). In this module, examples are presented to demonstrate how information from spell or episode datasets can be used to enrich cross-sectional data for analyses.
16:00 - 17:30	**NEPS-ADIAB** The NEPS data linked with administrative information from the IAB offer high additional research potential. This module introduces the contents and structures of the NEPS-ADIAB database. In addition, the prerequisites and ways of accessing the data are explained.

A general note: Before attending a NEPS data training course, it is strongly recommended to have a look at our collection of video tutorials, especially "NEPS Startkohorten", "NEPS Universum" and "Scientific Use Files" (currently available in German only).
